

Position	Frontend Intern	Task1: Webpage creation
Required skillset	HTML, CSS, Javascript	You are given a Figma file with the page design You are asked to create HTML CSS code accordingly
DT Tech Stack	Mongo DB, Node.js, NodeBB, Express framework, Confluence Kafka, Nginx, React Native, Vanilla Javascript.	Task2: Dynamic elements Given: JSON objects and functionality detail Todo: Execute a dynamic page with the functionality
About DeepTech	A Technology is considered to be DeepTech if a considerable amount of research has gone into its development. DeepThought has researched Psychology to develop a new way of building EdTech applications.	Why these tasks In order to succeed as a Frontend developer, three qualities are important- comprehension of documentation, aesthetic sense and execution of logic . These two tasks assess your ability to understand the functionality and execute with a sense of aesthetics and logic.
DeepTech Mindset	Ability to comprehend new ideas, think abstract, brainstorm more, ask questions, be excited about new possibilities through Technology	All DT interns are trained on the complete Tech stack, irrespective of the specialization, so every has a holistic understanding of the development process. The interns also go through DT's socio-psychological learning models, level-5 leadership and DeepTech innovation training
Submission		
You may upload your code to Github and also record a voice note describing your thought process- how you did it
